SMART LOGISTICS · STYLE GUIDE FOR AI AGENTS

FreshWay Data

Dashboards and 3D data visualisation in the style of a keynote: one insight per view, soft rounded shapes, plenty of space. Give **DESIGN.md** to your coding agent; this PDF shows what it describes.

FreshWay is a fictional company, used as a case in Smart Logistics.

PRINCIPLES

Five rules that carry the style

1 One insight per view

Say it in one sentence above the scene. Show one key figure large. Leave room: the data takes at most 60% of the width.

2 Green acts, red points

FreshWay green is for the logo and buttons, never for data. Apple red marks the one insight, only when there is one data series.

3 Colour plus a second signal

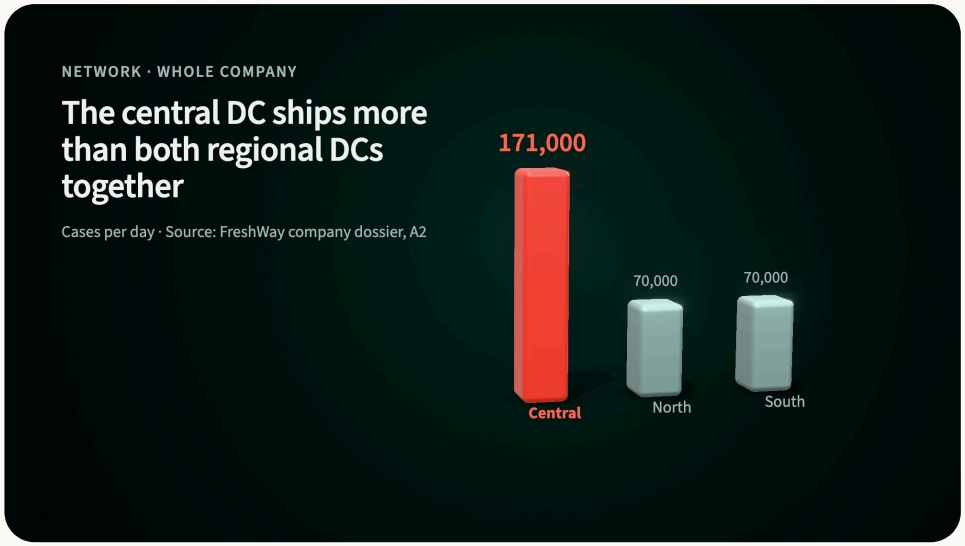

Every series also gets its own shape and a label. A chart must still work in black and white and for colour-blind readers.

4 3D to enter, flat to read

The camera moves in and stops in a reading position. Labels only appear when the camera stands still. Every 3D chart has a flat version.

5 Every number has a source

Unit, source and confidence label (H hard, A derived, S estimate), as in the company dossier.

One insight, one red bar, the key figure as label. Dark presentation mode.

FreshWay

Logo: use **freshway-logo-cropped.png** in page headers.

COLOUR

A calm palette with one red apple

Brand and stage

FreshWay green
#00702E · action

Apple red
#E8321E · the insight

Sage
#86A6A1 · calm data

Paper
#FBF9F5 · page

Light stage
#FFFFFF → #DFE1DC

Dark stage
#22342F → #060B0A

Several series: colour plus shape

■ **Petrol**
#1F5C74 · cube

● **Ochre**
#D79B1E · sphere

▲ **Sky**
#8CBBD9 · cone

◆ **Clay**
#A8805F · octahedron

○ **Other**
#C9CFCC · torus

Estimate (S)
semi-transparent, hatched

Sequential: one petrol hue, darker means more.

Diverging: ochre to petrol, along the blue-yellow axis.

Never apple red in a view with several series: red and ochre look alike for red-green colour-blind readers.

Source Sans 3, large where it counts

key figure · 120 / 72 px	**240**
headline · 40 px	**Three centres, 120 stores**
title · 26 px	**Cases per day**
body · 17 px	Body text, at least 17 px.
label · 15 px	**Labels in the 3D scene**

- Body text at least 17 px, labels in the 3D scene at least 15 px on screen, whatever their distance to the camera.
- Buttons at least 44 px high, icons 24 px, always with text.
- Light mode is the default: it stays sharp on a projector in a lit room. Dark mode is for full screen in a dimmed room.
- Contrast: text on dark 16:1, labels on dark 8.6:1, muted text on light 6:1.
- Two weights: 400 and 600. 700 only for the red insight label.

Light mode, reading position for bars: elevation 9°.

Soft, physical, and still exact

Light: rounded blocks with a gradient, clear coat, a short soft shadow and a contact shadow.

Dark: a rim light from behind, bloom only on the insight.

Material

Rounded blocks, radius 0.1 at width 0.62. Lacquered, not metal: roughness 0.34, clear coat 0.6. A gradient from 22% darker at the bottom to 6% lighter at the top.

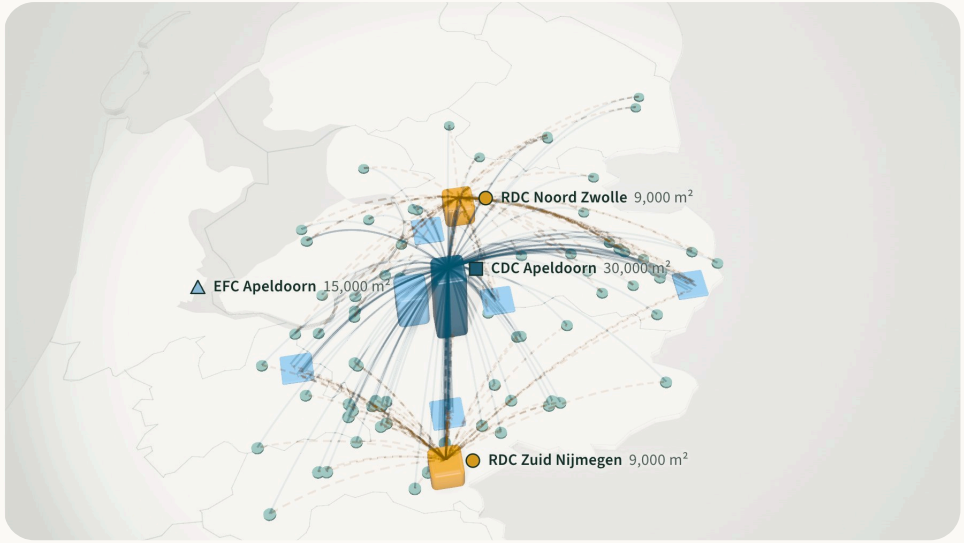

Light

One key light almost straight above, a hemisphere fill and a rim light. The background is a radial gradient without horizon; the floor only catches shadow.

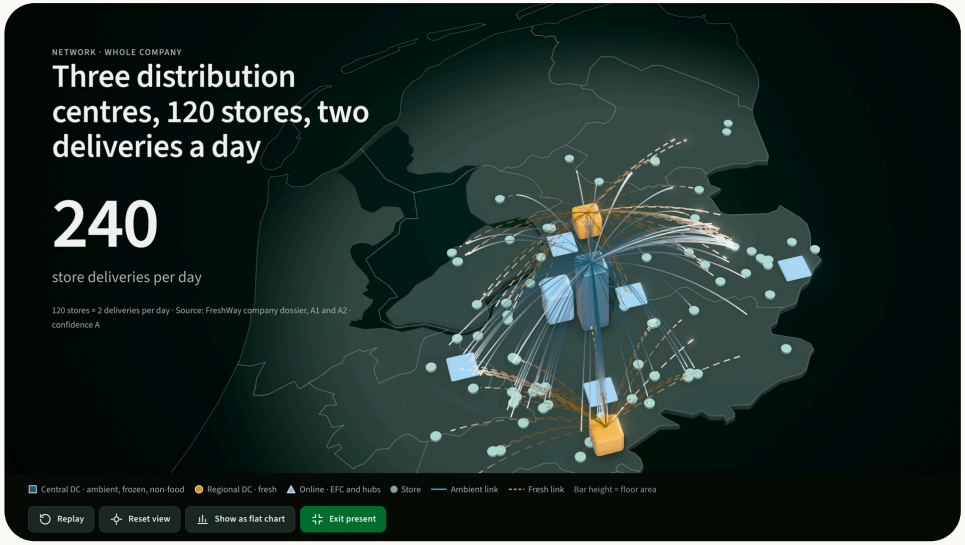

Effects

At most three passes: render, ambient occlusion, bloom (dark only, threshold 1.2). No depth of field, no glass, no neon.

A map you read from above

Light: land as a thin plate that fades towards the edges. Reading position 50° to 60°.

Dark, during build-up: a point of light travels along each arc and fades. Land in deep green-grey #2A3834.

- No apple red with several series: the key figure carries the insight.
- Fresh flows dashed, ambient flows solid: the second signal next to colour.
- Heights on a map are read from labels, so labels are required.
- In the final view nothing glows; arcs at 45% opacity, full on hover.

MOTION

Five seconds, played once

Network map. Bar charts follow the same rhythm: bars grow from 0.86 s, camera 1.71 to 4.0 s, labels from 4.0 s.

0.0 s
Stage and light, camera at entry position (−40°, 30°).

0.71 s
Distribution centres grow, until 2.43 s. No overshoot.

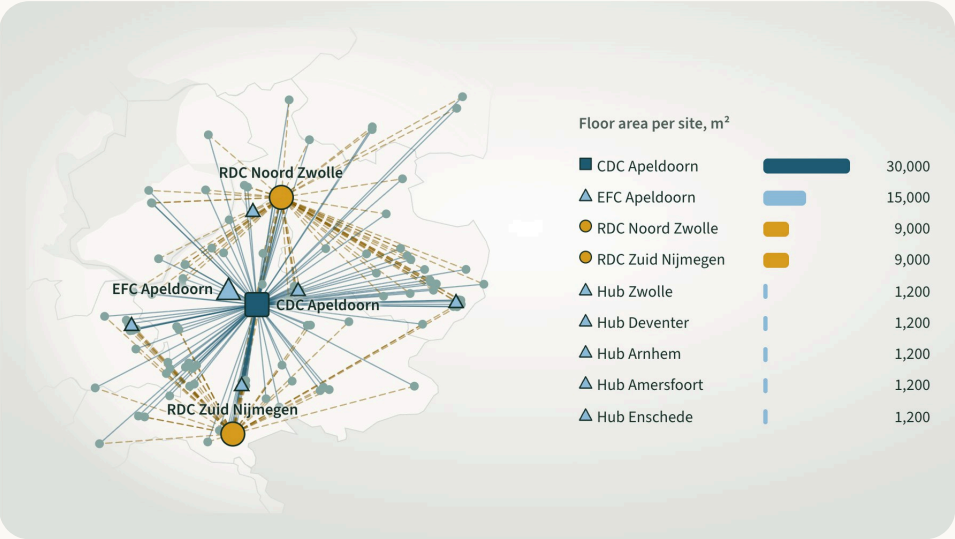

1.14 s
Stores appear, until 2.71 s.

1.71 s
Camera moves to the reading position, until 4.0 s.

1.86 s
Arcs draw themselves, until 4.29 s.

4.29 s
Labels fade in over 0.36 s.

5.0 s
Final view. Stillness, no loop.

Every 3D chart has a flat version, for exact reading and for readers who prefer no motion.

- Text never moves with the camera. Key figures do not count up.
- Start when the stage is half in view; stop rendering when it is out of view.
- With reduced motion switched on: show the final view straight away.
- Controls under the stage: Replay, Reset view, Show as flat chart, Present. Switching light and dark takes 0.4 s.

CHECKLIST

Do's and don'ts

Do

- One insight per view, in one sentence.
- Unit, source and confidence with every number.
- Colour plus shape, position or label.
- End in the reading position; labels once the camera stops.
- Light by default, dark as presentation mode.
- A flat version of every 3D chart.
- Say how you made it, with your Human-AI Agency label.

Don't

- Apple red next to ochre, or with several series.
- Green as a data colour or as a sign for "good".
- Neon, glass, hard reflections, glow on anything but the insight.
- Bars that overshoot or bounce, numbers that count up.
- Depth of field, or slanted and hidden labels.
- Text under 15 px, buttons under 44 px.

> Transparency GenAI. This style guide and its examples were made together with GenAI, based on the requirements and feedback of the teacher, who directed the work and checked the result.
